FOR IMMEDIATE RELEASE

June 23, 2009

### ACG's New Aquaculture Science & Technology Blog is Online

NOVI (Michigan) - June 23, 2009 - Today, The Aquaculture Communications Group (ACG) launched its Aquaculture Science & Technology blog at <http://aquacomgroup.com/wordpress>.

"Being the '[Home of Aquaculture Science & Technology Information Services](#)', it is only natural that our blog will focus on communicating the latest developments in aquaculture science & technology (S&T) to our colleagues in the global aquaculture community, as well as to others interested in the growth and evolution of this exciting seafood production industry," said Dave Conley, ACG Senior Consultant.

Today's global aquatic farming industry is very information and technology intensive, utilizing advanced S&T to overcome the many challenges associated with this pioneering renewable resource development sector. As the world's fastest growing food production sector, it must utilize the research and development findings emerging from public and private institutions to maximum environmental, social and economic benefit.

"It is our objective to utilize our contacts within the global aquaculture community to seek out and communicate innovative S&T information, products, and services to help advance the growth and development of aquaculture everywhere," said Tor-Eddie Fosbakk, ACG Senior Consultant.

The Aquaculture Communications Group (ACG) has a mission to be a world-class facilitator for the sourcing and exchange of aquaculture science, technology, and business information using 'new media' and other rapidly developing digital technologies.

With over 60 years of combined experience in aquaculture R&D and S&T, policy, and business development, the principals of ACG have developed an extensive global network of contacts in the research & development, academic, business, and government communities that comprise today's aquaculture industry.
